

Who Needs Lifeline?

You can benefit from Lifeline if you answer yes to any of the following:

- You are home alone on a frequent basis
- You are at risk for falls
- You use adaptive devices to assist you with walking
- You are managing a medical condition
- You would feel more comfortable knowing help was always available

And All of Northern Vancouver Island**

What Is Lifeline?

Lifeline is a two-way voice communication system that gets you help 24/7 at a push of a button. The system works with your existing phone line or through a wireless connection. If you need assistance or are concerned about your safety, just press the button and the Lifeline unit will open a two-way voice connection between you and our response center team.

Types Of Lifeline Systems

HomeSafe Basic

Wear your basic help button around your neck or wrist and get access to help at the push of a button from anywhere within range of the in-home Communicator.

HomeSafe with AutoAlert

HomeSafe with AutoAlert is designed to automatically detect hard falls and send a call for help even if you can't push the button yourself. This is an excellent choice if you have a history, risk or fear of falling.

GoSafe Mobile Help Button

GoSafe gives you the freedom to go where you want, when you want. This system has six locating technologies designed to help find you anywhere in Canada should an emergency occur.

How Lifeline Works

If you need help, push your Personal Help Button.

Your Lifeline Communicator Unit dials our Response Centre.

A Response Centre Associate assesses your situation and sends you the help you need.

Whether it is a family member, a neighbour or ambulance, Lifeline always sends you the help you need.

What You Need To Know

To subscribe to Lifeline, you will require “responders”. Responders are people that you know who live five to ten minutes away from your home and have a key to your home. When you push your help button, we will call an ambulance if requested or responders to help. If no responders are available we will send emergency services. We encourage you to have a lock box or hidden key on site, so that emergency services will be able to access your home when no responders are available.

You will need to provide some basic medical information such as your medical conditions, allergies and doctor's name.

For information on how to get started, call the Lifeline Office in your area.
